TABLE OF CONTENTS

CHAPTER 1

INTRODUCTION

1.1 PROJECT OVERVIEW

This application is a skill recommender solution through which the fresher or the skilled person can log in and find jobs by using the search option or they can directly interact with the chatbot and get their dream job.

To develop an end-to-end web application capable of displaying the current job openings based on the user skillset. The user and their information are stored in the Database. An alert is sent when there is an opening based on the user skillset. Users will interact with the chatbot and can get recommendations based on their skills. We can use a job search API to get the current job openings in the market which will fetch the data directly from the webpage.

1.2 PURPOSE

The purpose of this project is to make it easy for users to find jobs and internship opportunities under one single platform. It assists the users to filter out job searches and find the relevant job that matches their skills. This platform not only helps users to find jobs but also helps job recruiters to take in candidates to their company whom they think perfectly fit the position available.

CHAPTER 2

LITERATURE SURVEY

2.1 EXISTING PROBLEM

Technology hasn't made networking any easier, it's still challenging.People are too afraid and time-constrained to network until they really have to, as when they are looking for a new job. The process of connecting with the recruiters through networking also takes a lot of time. The greatest approach to get a new job is networking, as it is widely recognised but most people are unaware of how to do it effectively.

Job criteria are abundant in job descriptions,and the recruiter often gives each one equal weight. While some firms are better at correctly identifying the essential talents for a position, if a job need calls for more than five skills, those skills need to be given a different weighting.

Because talents are not standardised, potential candidates are unsure of whether their skills are close enough to the requirements to match.

First-time job seekers as well as people who have been out of the workforce for a long time sometimes run across this issue. On the one hand, time is of the essence, and you don't want to squander it searching in vain. On the other hand, you must be sure to follow up on any job lead you come across.

2.3 PROBLEM STATEMENT DEFINITION

To develop an end-to-end web application capable of displaying the current job openings based on the user skillset. The user and their information are stored in the Database. An alert is sent when there is an opening based on the user skillset. Users will interact with the chatbot and can get the recommendations based on their skills. We can use a job search API to get the current job openings in the market which will fetch the data directly from the webpage. Although in the literature exists a variety of techniques and strategies used as part of job recommender systems, most of them fail to recommend job vacancies that fit properly to the job seekers profiles. Thus present a general panorama of job recommendation task aiming to facilitate research and real-world application design regarding this important issue, job matching, job seeking, job search and of job recommendation system. Proposed a framework for job recommendation task. At the time of commencement students/recruiters want to sign up and fill in the needed details. For the students who need to upload their resumes, the system will analyse the resume spontaneously and fill-up the requisite data. Determining the skill keywords from the resume and then matching them with the suitable jobs of their skills. The students/recruiters can add, update, delete their specifications always. Recruiters can create new jobs/internships, edit the previous jobs, and close the response of the jobs at any time also, they get personalized job recommendations based on their skills. The recruiters can post their new job, the system will promptly transmit push notifications to the suggested applicants. The contestants can take assessments in every domain to boost their skills which we have provided. Assessment's grade is used for creating leader board which is shown to the recruiters with the certification grades.

CHAPTER 3

IDEATION & PROPOSED SOLUTION

3.1 EMPATHY MAP CANVAS

An empathy map is a short, easy-to-understand visual that gathers information about a user's actions and attitudes. It is a valuable tool for assisting teams in a greater understanding of their users. Understanding the major issue and the person experiencing it is essential for developing an effective solution. The map-making exercise makes participants analyze things from the user's point of view, as well as his or her goals and obstacles.

Since a lot of companies gives advertise job opportunities and offers that turn out to be fake. This portal eliminates the chances of fraudulent companies providing false information With the help of an AI-supported search engine that filters out the relevant job for users based on their skills.

3.2 IDEATION & BRAINSTORMING

In Ideation and Brainstorming phase there were many ideas that comes to mind which address the problem statement. Ideas like to develop a job website with various web pages and makes the website more efficient and useful to job seekers in which management of the users data will be in a proper manner, fake job detection, Efficient connectivity between job seekers and recruiters, Students or Recruiters can add or delete or update their specification at all times, Resume extraction or resume parsing helps in analyzing, storing extracted useful information from the uploaded CV automatically, Job Seekers are recommended skills to gain and ways to strength their resume based on their preferred job roles, Determining the skill keywords from the resume and then matching them with a suitable job of their skills, Can conduct an online test which will check the users skill in a particular domain and their score will be provided and showed in the website these assessment's grade is used for creating leader board which is viewed by recruiters with the certification, Filtering of candidates based on their skills, developing a chatbot to give personalized job recommendations for the candidates, users can navigate to any web pages without any interruption, Backup and recovery options for users account and job search history.

3.3 PROPOSED SOLUTION

S. No	Parameter	Description
1.	Problem Statement	Field-based job searching is time-consuming
2.	Idea / Solution description	Recommendation System
3.	Novelty / Uniqueness	Refinement of the job fields
4.	Social Impact / Customer Satisfaction	opens doors for every user as there is free access
5.	Business Model (Revenue Model)	Notifying about the platform
6.	Scalability of the Solution	Scalable at professional and environmentally friendly

3.4 PROBLEM SOLUTION FIT

Recruiters can post for the job openings in our application. Users can interact with the chatbot via entering your query to the bot, it guides the users in a proper way. List of jobs are uploaded into the database and the chatbot is also connected with the database. By using this web application job seekers directly choose their job.

CHAPTER 4

REQUIREMENT ANALYSIS

4.1 FUNCTIONAL REQUIREMENT

To develop this job portal, React - a javascript framework has been adopted since React.js is an open source JavaScript library that is used for buliding user interfaces specifically for single-page applications. It's used for handling the view layer for web and mobile apps. React also allows us to create reusable UI components. React allows developers to create large web applications that can change data, without reloading the page. The main purpose of React is to be fast, scalable, and simple. It works only on user interfaces in the application. This corresponds to the view in the MVC template. It can be used with a combination of other JavaScript libraries or frameworks, such as Angular JS in MVC. In React, a set of immutable values are passed to the components renderer as properties in its HTML tags. The component cannot directly modify any properties but can pass a call back function with the help of which we can do modifications. This complete process is known as "properties flow down; actions flow up".

HTML (the Hypertext Markup Language) and CSS (Cascading Style Sheets) are two of the core technologies for building Web pages. HTML provides the *structure* of the page, CSS the (visual and aural) *layout,* for a variety of devices. Along with graphics and scripting, HTML and CSS are the basis of building Web pages and Web Applications.

Flask is a web framework, it's a Python module that lets you develop web applications easily. It's has a small and easy-to-extend core: it's a microframework that doesn't include an ORM (Object Relational Manager) or such features.Unlike the Django framework, Flask is very Pythonic. It's easy to get started with Flask, because it doesn't have a huge learning curve. On top of that it's very explicit, which increases readability.

The general availability of IBM SmartCloud Notes, based on the software as a service (SaaS), has been announced and is ready to use. IBM SmartCloud Notes provides a lot of services to help you work.

IBM has integrated the essential tools for social business in the cloud: enterprise-grade file sharing, communities, instant messaging, web meetings, user profiles, mail and calendar.

FR No.	Functional Requirement (EPIC)	Sub Requirement
FR-1	User Registration	Registration through Phone number Registration through Gmail Registration through username
FR-2	User Confirmation	Confirmation via Email
FR-3	Chatbot	This chat-bot assists the users with the problem raised by the user and provides a solution regarding job searches.
FR-4	User login	Mail ID / Phone Number
FR-5	User Search	The user seraches are filtered and the results are provided according to their skill set.
FR-6	User-profile	The user can edit their profile and update their skills and resume.

4.2 NON - FUNCTIONAL REQUIREMENT

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	This application can be used by job seekers to log in and search for a job based on him/her skill set and also the webpage will be designed in such a way that any non-technical user can too easily navigate through it and complete the job registration work.
NFR-2	Security	This application is secure with a separate login for job seekers as well as job recruiters.
NFR-3	Reliability	This application is open-source and feel free to use, it without any payment process. The enormous job openings will be provided to all the job seekers without any limitations.
NFR-4	Performance	The users get quicker updates and results based upon their searches regarding their particular skill.
NFR-5	Availability	This application is available for a wide range of job openings and recruitment options.
NFR-6	Scalability	The response time of the application is faster compared to any other application and increasing the storage space of database can increase the number of users.

CHAPTER 5

PROJECT DESIGN

5.1 DATA FLOW DIAGRAMS

A Data Flow Diagram (DFD) is a tradiational visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It show how data enter and leave the system , what changes the information, and where data is stored.

5.2 SOLUTION & TECHNICAL ARCHITECTURE

Solution architecture is a complex process - with many sub processes - that bridges the gap between business problem and technology solutions.

Jobs must be recommended based on the skills and experience of the candidate.

The job recommendation engine makes the conversion, and the company or job is moved up in the view list or priority list.

5.3 USER STORIES

FUNCTIONAL REQUIREMENT	USER STORY NUMBER	USER STORY/ TASK
UI Design	USN-1	As a User, I can see and experience an excellent user interface in the website.
Registration	USN-2	As a User, I have to create account and verify using mail
Registration	USN-3	As a Recruiter, I have to create account and verify using mail
Login	USN-4	As a User, I can login into the application by entering the E-mail and password.
Job search	USN-5	As a User, I can search for jobs by categories such as salary , location , Role & etc.,
Recommended job	USN-6	As a User, I get jobs based on my skillset
Bookmark	USN-7	As a User, I can bookmark or tag any number of job posts for quick access
Remove Fraudulent job	USN-8	The application analyses the job posting by the recruiters and remove fake job posts.
Develop a chatbot	USN-9	As a User, I can able to interact with the appplication and clarify the doubt.
Get a Job alerts	USN-10	As a job seeker, I can get Immediate notification after the new job has been posted based on the skill.
Deployment	USN-11	The system is deployed on the IBM cloud. It is made available for use.

CHAPTER 6

PROJECT PLANNING & SCHEDULING

6.1 SPRINT PLANNING & ESTIMATION

Sprint	Functional Requirement	USN	User story / Task	Story Points	Priority
Sprint-1	UI Design	USN-1	As a user, I can see and experience an excellent user interface in the website	6	Medium
Sprint-1	Registration	USN-2	As a User, I have to create account and verify using mail	4	High
Sprint-1	Registration	USN-3	As a Recruiter, I have to create account and verify using mail	7	High
Sprint-1	Login	USN-4	As a User, I can login into the application by entering the E-mail and password.	5	High
Sprint-2	Job Search	USN-5	As a User, I can search for jobs by categories such as salary , location , Role.	3	Medium
Sprint-2	Recommendation	USN-6	As a User, I get jobs based on my skillset	5	High
Sprint-3	Bookmark Job	USN-7	As a User, I can bookmark or tag the jobs.	2	Low
Sprint-3	Remove Fraudulent Job	USN-8	The application analyses the job posting by the recruiters and remove fake job posts.	4	Medium
Sprint-3	Develop a chat bot	USN-9	As a User, I can able to interact with the appplication and clarify the doubt.	3	Low
Sprint-4	Get a job Alerts	USN-	As a job seeker, I can get Immediate	3	Medium

| | | 10 | notification after the new job has been posted based on the skill. | | |
| Sprint-4 | Deployment | USN-11 | The system is deployed on the IBM cloud. It is made available for use. | 8 | High |

6.2 SPRINT DELIVERY SCHEDULE

Sprint	Total story points	Duration	Sprint Start Date	Sprint End date	Story pints completed	Sprint Release date
Sprint-1	20	6 Days	24 Oct 2022	29 Oct 2022	20	29 Oct 2022
Sprint-2	20	6 Days	31 Oct 2022	05 Nov 2022	20	05 Nov 2022
Sprint-3	20	6 Days	07 Nov 2022	12 Nov 2022	20	12 Nov 2022
Sprint-4	20	6 Days	14 Nov 2022	19 Nov 2022	20	19 Nov 2022

Average Velocity = Sprint Delivery / Velocity

= 20 / 6

= 3.33

CHAPTER 7

CODING & SOLUTIONING

7.1 FEATURE 1

Resume parsing:

There are many online services that offer resume parsing. Some popular services include Indeed, Hired and ZipRecruiter. You can use these services to parse your resume and generate a list of relevant jobs. The resume parser will extract the relevant information (e.g. your skills, work experience and education) from your resume and then match it against a database of job postings. The matching process results are used to rank the jobs and generate a recommended list of jobs for you

Targeted Resume:

7.2 FEATURE 2

Recommedation System:

A Recommendation System For Students Is An Online Tool That Helps College Professors Or Employers Identify And Recommend Potential Employees. The Tool Can Be Used To Compile A List Of Students Who Have Worked Or Studied With The User, And Provides Detailed Profiles Of Those Students. Students Can Use A Recommendation System To Build Their Resume And Highlight Their Strengths To Potential Employers

CHAPTER 10

ADVANTAGES & DISADVANTAGES

There are many advantages to job and skill recommendation. First, it can help you find a new job or skill set that is a good match for your skills and interests. Second, it helps you improve your skills by taking courses that interest you or practicing your skills in your current job. Third, it allows you to improve your work-life balance by giving you better opportunities to advance your career or find new employment without leaving your current job. Finally, it can help you learn a new skill that can help you in your career. However, there are also some disadvantages to job and skill recommendations. It's no secret that the internet has revolutionized how we search for information. With so many sources of information at our fingertips, it's no wonder that some people believe that all knowledge is available at the touch of a button. However, it's often the case that the most accurate information available doesn't show up at the top of Google's search results. This presents several disadvantages when it comes to searching for a job. Here are a few of the main drawbacks of using online job listings to help you land your next position: First of all, the jobs that you find using online job listings are often quite outdated. This means that you could be applying for a job that is no longer available or could soon be phased out of the company altogether. Sometimes the jobs that are available through online listings don't accurately reflect the current state of the industry, which can lead to a lot of wasted time and frustration on your part.

CHAPTER 11

CONCLUSION

The portal thus developed will improve the user's chances of getting a job in an efficient manner and ease out the work of searching job that matches with their skill. This portal will thus help unemployed candidates find the perfect job role and will also improve their skills. It will also enable user to network with other people and professional organizations in your industry. This is a great way to stay up to date with the latest developments, and to share information with others in your field.

CHAPTER 12

FUTURE SCOPE

The role of job portals in the hiring process is becoming increasingly important as businesses strive to find new talent quickly and efficiently. With advancements in artificial intelligence (AI), job portals may soon become the go-to source for employers looking to fill vacancies and job seekers looking for their next opportunity. For job seekers, AI-powered job portals will give them the power to seek out better opportunities based on their unique skills, qualifications, and preferences. Employers, on the other hand, will be able to use AI and machine learning to automate much of the recruitment process, reducing their costs and making it easier for them to find the right talent for their organisation. The emergence of AI in the recruitment process is good news for both employers and job seekers alike. By helping to simplify and improve the recruitment process, AI will enable businesses of all sizes to attract and retain top talent without having to spend a fortune on expensive recruitment agencies or advertising costs. As the adoption of AI technology continues to grow across the workplace, we expect to see more companies using it to improve their recruiting strategies in the coming years.
